

N-LOCK

All the rest are just stabilizers.

The only biostimulant on the market that adds biostimulants for superior nitrogen efficiency.

with NBPT and DCD

The LCN complex: Reduced LOSS

- NBPT reduces ammonia volatilization
- DCD and Phenols reduce denitrification and leaching
- Progressively supplies three forms of nitrogen to the crop

Organic Acids and Microbial Activation: Increases AVAILABILITY

- Proprietary formula improves soil retention of fertilizer nutrients and enhances mineralization

The Rhizovit complex: Stimulates Root UPTAKE

- Patented biostimulant complex that increases root mass and fine root hair development
- Enhanced nutrient assimilation

N-LOCK is more than a stabilizer. It can be used on urea and UAN with no crop restrictions. Has a low rate, high concentrate formula that will not cause fertilizer bridging, plugging or corrosion.
