

**APSBF**- APSBF is a seed-applied systemic fungicide containing metalaxyl, thiophanate, fludioxonil. Systemic activity means the active ingredient in APSBF is translocated to all parts of the plant during germination. APSBF offers excellent control of select diseases, protecting the seed, roots and emerging plants against diseases such as pythium, phytophthora, fusarium, and rhizoctonia. APSBF can be applied as a stand-alone seed protectant or in combination with other seed treatment products for optimum flexibility.
