AP 505

Rate 1-2pts/100

**Add to fungicide, miticides,
insecticides, and fertilizers**

AP 505 is an organosilicone surfactant blend, high-performing spray adjuvant that allows for rapid spreading and absorption of pesticide sprays onto leaves and plant surfaces and is especially effective with water-based pesticide formulations.

AP 505 contains an organosilicone surfactant component, which lowers the surface tension and contact angle of the spray droplets below conventional surfactants and forms a thin layer on the surface of the leaf, resulting in more uniform coverage on plant surfaces. **AP 505** should be used in agricultural tank mixes, where good coverage is important.
