

Expedite Mn

Guaranteed Analysis

Manganese..... 3.0%

3.0% Chelated Mn

Derived from Mn EDTA.

ALSO CONTAINS NON-PLANT FOOD INGREDIENTS:

Lipase..... 2.0 x 10³ µUnits/mL

Mannanase..... 1.0 x 10⁶ µUnits/mL

Compatibility and mixing:

Expedite Mn can be mixed with most NPK fertilizers that have a neutral pH range (5 to 9) as well as with water carrier solutions. Expedite Mn must only be mixed with EDTA chelated micro nutrients.

Application Rates:

Soil Application

Field and Row Crops: 1 quart per acre in furrow or banded either as a stand alone or in combination with liquid NPK starter fertilizers at planting or 1 quart per acre banded in the strip till not more than 2 weeks before planting.

Knowledge to sell this product:

Enzymes

Soil microbes produce enzymes to break down organic materials in the soil. This process allows bio-available nutrients to be released. The idea behind Expedite Mn is to gain the benefits of enzymes without dealing with microbes. Soil microbe activity is affected by cold soil temperature. This makes Expedite Mn a perfect choice for corn starters. By adding Expedite Mn to your starter fertilizer you are boosting the enzyme activity in your soil 100-1200 times what it is naturally.
