

AP Mixer

Compatibility Agent

Principal Functioning Agents:

Alcohol ethoxylate phosphate ester	55%
Constituents Ineffective as a Spray Adjuvant	45%
Total	100%

AP Mixer is a 55% active alcohol ethoxylate phosphate ester, designed for use as an anionic compatibility agent that aids in the mixing of liquid fertilizers with pesticide tank solutions. When used as a compatibility agent in liquid fertilizer-pesticide spray mixtures, **AP Mixer** improves the dispersion and uniformity of tank mix ingredients. **AP Mixer** may be used with pesticides registered for use on all agricultural, forestry, industrial, non-cropland, rights-of-way, turf and municipal, and other uses.

Compatibility and mixing:

It is recommended to add **AP Mixer** to the fertilizer with the agitation on before adding the pesticide. Use 1 to 2 pints of **AP Mixer** per 100 gallons of liquid nitrogen/pesticide tank mixture. Apply immediately after mixing. If allowed to stand for extended period of time, ensure that tank mix is agitated again before using.

Knowledge to sale this product:

Compatibility agents are used to help certain pesticides mix with fertilizers. The key is to mix in the rate order. Fertilizer then Mixer then Pesticide.
