

EXPEDITE MN FLOW

1-2 oz/unit of seed

AP Expedite Mn Flow is a premium seed flow agent formulated with key micronutrients and patented enzyme technology to improve early seed vigor and nutrient use efficiency. Designed for smooth seed handling and even delivery, it enhances planter performance while supporting early-season plant development.

KEY BENEFITS

- Improves seed flowability and planter performance
- Enhances early seed vigor
- Supplies essential micronutrients at planting
- Promotes nutrient use efficiency during early growth
- Helps ensure uniform seed coverage

WHY MICRONUTRIENTS AT PLANTING MATTER

Early-season micronutrient availability is critical for uniform emergence and early vigor. Manganese, iron, and molybdenum play key roles in enzyme activation, chlorophyll production, nitrogen metabolism, and overall plant energy processes. Applying these nutrients directly on the seed places them exactly where the plant needs them at emergence.

GUARANTEED ANALYSIS

Iron (Fe) 1.00%
Manganese (Mn) 3.00%
Molybdenum (Mo) 5.00%

Derived from: Iron oxide, manganese oxide, and molybdenum trioxide.

APPLICATION AND USE

AP Expedite Mn Flow may be applied directly to seed in the planter box, seed box, or seed tender. Apply in layers and gently stir to ensure uniform seed coverage. Dry powder applicator meters may also be used.
